PROFESSIONAL SUMMARY

Data analyst with experience in Power BI dashboard development (advanced DAX, Power Query, star schema dimensional modeling), data extraction and transformation with SQL and Python (pandas), and ETL/ELT pipeline construction. Experience in multi-source environments focused on operational KPIs and communicating insights to managers. Familiarity with semantic modeling, metric documentation, and Medallion Architecture. Engineering background with an analytical profile and intermediate-advanced English.

PROFESSIONAL EXPERIENCE

Agricultural Analyst II – Fundação Solidaridad - February 2025 – September 2025

- Design and implementation of analytical data modeling for monitoring 128 production units, establishing operational KPIs and performance indicators that standardized the project's success metrics.
- Documentation of analytical processes, data flows, and metric definitions.

Technical Consultant – Federation of Industries of Pará (FIEPA) - November 2023 – January 2025

- Optimization of indicator analysis time from one week to a single day through the centralization and automation of monitoring ninety production units in Power BI dashboards (DAX/Power Query), enabling real-time insights for management.
- Elimination of decision-making bottlenecks by migrating static PowerPoint reports to a dynamic fish farming Risk Map panel, ensuring 100% reliable and traceable data and enabling immediate strategic deliberations during management meetings.
- Translation of technical metrics into executive presentations focused on quantitative reasoning and visual clarity, guiding investment decisions by managers and directors.

EDUCATION & CERTIFICATIONS

Power BI Fundamentals – Xperiun - 2025

Power Query, Data Modeling, DAX, Storytelling, Power BI Service, Microsoft Fabric

Data Analyst Professional – Xperiun - 2026

Advanced SQL, Apache Hop, Advanced Power Query, Advanced Data Modeling, Advanced DAX

Python for Data Analysis – Xperiun - 2025

B.S. in Fisheries Engineering – Federal University of Pará (UFPA) - September 2022

PROJECTS

fish_trade_analytics – Data Engineering + Power BI

- Construction of a robust ELT pipeline integrating Python (pandas/requests) for API consumption, PostgreSQL via Docker for storage, and dbt for transformation under Medallion Architecture (Bronze/Silver/Gold).
- Development of analytical datasets structured in a star schema and creation of a semantic layer with advanced DAX for complex business analyses (Top N + Others, ABC/Pareto Curve, and Time Series).
- Orchestration of the complete flow using Apache Airflow 2.8, ensuring autonomous execution and end-to-end documentation of queries and data lineage.

fish_trade_analytics_fabric – REST API + Microsoft Fabric

- Architecture of the migration from the open-source project to the Microsoft Fabric environment, centralizing structured, semi-structured (JSON, CSV), and unstructured data in a modern OneLake Lakehouse.
- Increase in operational efficiency through the creation of parameterized and dynamic Data Pipelines, eliminating hardcoding with the strategic use of Variable Libraries for API key security.
- Reduction of cloud processing costs through the implementation of incremental update logic based on metadata tables, avoiding unnecessary reprocessing of the historical base.
- Implementation of software engineering best practices by adopting CI/CD pipelines for code versioning and safe deployment across environments.

Controlling Dashboard (P&L) – Power BI

- Design from scratch of financial dimensional modeling, applying advanced DAX measures, time intelligence, and Storytelling techniques with dynamic text to provide clear economic diagnostics.

TECHNICAL SKILLS

BI & Visualization: Power BI, Advanced DAX, Power Query, Power BI Service, Dimensional Modeling (Star Schema), Data Storytelling.

Data & SQL: Advanced SQL (PostgreSQL, CTEs, Window Functions, Views, Complex Joins and Query Optimization), Python (pandas, requests, json), ETL/ELT processes.

Engineering & Cloud: dbt (Medallion Architecture), Microsoft Fabric (Lakehouse, Data Factory), Apache Airflow, Apache Hop, REST APIs, Git/GitHub, Azure DevOps.

LANGUAGES

Portuguese: Native - **English:** Intermediate (advanced reading and listening comprehension; technical writing in development)
